Additional Information regarding Credit Card Acceptance at Carolinonet:

To avoid credit card fraud and due to new credit card merchant and banking agreements and we can no longer accept credit card information by telephone or by email.

CVV is an anti-fraud security feature to help verify that you are in possession of your credit card. For Visa, Mastercard and Discover, the three-digit CVV number is printed on the signature panel on the back of the card immediately after the card's account number. For American Express, the four-digit CVV number is printed on the front of the card above the card account number.

NOTE: If your credit card does not have a CVV, please enter four zeroes (0000) on the CVV field.

Visa/Mastercard/Discover Cards

A 3-digit number in reverse italics on the **back** of your credit card

American Express Cards

A 4-digit number on the **front**, just above your credit card number

What is the CVV Number?

CARD VERIFICATION VALUE CODE (CVV) is a new authentication procedure established by credit card companies to further efforts towards reducing fraud for internet transactions. It consists of requiring a card holder to enter the CVV number in at transaction time to verify that the card is on hand. The CVV code is a security feature for "card not present" transactions (e.g., Internet transactions), and now appears on most (but not all) major credit and debit cards. This new feature is a three- or four-digit code which provides a cryptographic check of the information embossed on the card. Therefore, the CVV code is not part of the card number itself.

The CVV code helps ascertain that the customer placing the order actually possesses the credit/debit card and that the card account is legitimate. Each credit card company has its own name for the CVV code, but it functions the same for all major card types. (VISA refers to the code as CVV2, MasterCard calls it CVC2, and American Express calls it CID.)

The back panel of most Visa or MasterCard cards contain the full 16-digit account number, followed by the CVV/CVC code. Some banks, though, only show the last four digits of the account number followed by the code. To aid in the prevention of fraudulent credit card use, we now require the 3 or 4 digit code on the back of your credit card. When you submit your credit card information your data is protected by Secure Socket Layer (SSL) technology certified by a digital certificate.
